The Rangeland Bull breeding collective is possibly one of the only venues where purchasers can access animals with no artificial pre-sale preparation. As part of our Organic, GAP, EU & MSA Certifications not all animals have been vaccinated. All bulls have been vaccinated for Vibrio. Wetlands and Moriah bulls have also had 5 in 1 vaccination.

While we make every endeavour to ensure that no temperamental animals are presented, we cannot pre-empt what a yard of bulls will do. Please enter yards at your own risk and respect our animals.

Please arrange own transport where possible.

Breeding program at a glance

Rangeland Bulls is the only alternative where bulls are;

- *Bred commercially*
- *Fed commercially*
- *Grown commercially*
- *Marketed commercially*
- *Priced commercially*

What do Rangeland Bulls offer you?

As commercially focused beef producers, also selling seed stock, we share the growing interest in improving herd productivity and linking bull breeding to the commercial sector. We offer an alternative where animals have been selected for over 20 years based on genetic merit, without any artificial inputs or nutritional advantages. The objectives of our program and selection traits have remained constant over this time, with the goal of maximum net profit in a commercial environment. We have never set out to produce a large number of bulls and only bulls we would be satisfied to use ourselves are offered for sale.

- ✓ **Temperament**
- ✓ **Structural soundness** and vet checked
- ✓ **No artificial inputs.** The entire herd is grass fed, organic.
- ✓ **Fertility.** Selection pressure across the herd means every female must calve unassisted by 2 years of age and continue to wean a calf every 12 months, within a 90-day joining.
- ✓ **Polled**
- ✓ **Intense bull selection.** Only top 5% of male calves selected as bulls for continued genetic gain.
- ✓ **Early puberty.** Selection for scrotal size at weaning and one year old. Bulls must have reached puberty by one year old. Research shows scrotal size needs to be evaluated in terms of 'how big *and* how soon' ie when you want your heifers cycling.
- ✓ **Adaption.** Bred in tough environmental conditions to perform with no artificial inputs. All animals are grass fed, organic certified.
- ✓ **Bulls in paddock condition,** ready to work. View bulls in their 'working clothes' to select animals that can perform in a grass-fed environment.
- ✓ **Market suitability.** Selection traits based around fertility and growth patterns to meet organic, MSA market specifications, off grass.
